## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election without traverse of claims 1-34 in Paper No. 8 is acknowledged.

### *Specification*

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-9, 11-~~14~~<sup>13</sup>, 15-21, 24 and 27-34 are rejected under 35 U.S.C. 102(b) as being anticipated by EP0240965.

'965 discloses : apparatus 34 for processing articles comprising moving parts 84,88 for processing the article (Figs. 2 and 4; col. 6, line 28-col. 8, line 34), a plurality of microcontroller boards (56,58,60) secured to the apparatus , the microcontroller boards having a plurality of logic chips 58 secured thereto, sensors 56 for monitoring operation of the apparatus and providing input information regarding a plurality of monitored conditions to the microcontroller

boards, the microcontroller boards being structured to process the input information and emitting responsive control signals to other the microcontroller boards and control portions of the apparatus , and communicating means (Figs. 2 and 4)for effecting communication (a) between the sensors and the microcontroller boards, (b) among the microcontroller boards and (c) between the microcontroller boards and control portions of the apparatus , whereby the microcontroller boards will through receipt and processing of the input information for a plurality of monitored conditions and communicating with other the microcontroller boards effect control of a plurality of monitored apparatus conditions.

*Claim Rejections - 35 USC § 103*

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 10,14,22,23,25 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP0240956.

Official Notice is taken that utilizing an epoxy as sealing material, calibration means for providing information to communication means, workpiece being metal sheet stock, inspection process for the article and process including packing of articles are old and well known in the art and it would have been obvious to one of ordinary skill in the art at the time of the invention was made to utilize above mentioned thing to the apparatus of '956 so as to control the process more efficiently.

Art Unit: 3726

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John C. Hong whose telephone number is 703-305-0779. The examiner can normally be reached on M-F(07:00-16:30)First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Vidovich can be reached on 703-308-1513. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9302 for regular communications and 703-872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1078.
